

Banner book

helping
life flow
smoothly

Introduction

Welcome to the fencing banner catalogue. This has been created to help us all work together to ensure we proactively communicate with our customers in the same way, in the same voice.

The new brand look has allowed us to review the colours we use on our banners and site signage in general. We have developed a colour scheme for water and wastewater projects which will give our sites a fresh distinctive look.

Why use fencing banners?

The fencing around our works offers us an opportunity to proactively communicate with our customers by using the panels as free advertising space. They can enhance the look of a site whilst helping to convey a positive message about our capital programme or apologise for the disruption caused by long or short-cycle works. Proactive communication can help us reduce the number of calls and complaints we receive and in doing so reduce the cost to serve customers as well as increase satisfaction.

Where should we use them?

We use several different types of fencing for our short and long cycle works. From Block and Mesh (Heras) to Post and Plank, Corrugated Barricade and Molded Plastic. The banners shown in this catalogue are designed for full size Heras fencing (or for production at 60% size where wind or safety may cause concern). They can also be printed on roll down vinyl material for the different types of plastic fencing.

Bespoke sizes can also be produced for corrugated barricade or other types of panel fencing. Advice on where the banners should be placed on fencing or compounds can be found in our Best Practice Guide to Customer Signage. This document also contains costs and lead times for ordering banners.

When would we use generic banners?

For long cycle work your completed CIA sheet will determine the impact of the scheme. For medium and high impact schemes you should contact your customer communications support for advice (contact details are found on the last page of this catalogue). In these cases

we may recommend that bespoke messaging be created to tell the story of your scheme. This can range from localising the messaging on the banners to creating new illustrations.

The examples shown in this catalogue are generic which will mostly apply to low impact schemes.

And finally some 'How's'

How many banners you use will depend on a number of factors. The size of your site, the length of time you will be there, the impact on customers, the budget you have allocated for customer communications and most importantly the safety of our people and the public. The communications team are available to make recommendations as to the most appropriate messaging to use on your sites and to order the banners for you or our partners.

How to fix them? It is up to the project teams on site to affix the banners to the fencing (in most cases this will be done with cable ties which will need to be purchased separately from a hardware or DIY store). Please ensure that you keep the banners in as good a condition as possible. They are a reusable asset and whilst they are cost effective they are not cheap. A dirty, torn or poorly fixed banner will detract from any of the positive messages they may be conveying.

If you have any questions please contact your customer communications support. Details can be found at the back of this catalogue.

"Why wouldn't we want to take every opportunity possible to engage with our customers.

Each and every day many of them will come into contact with our business when they drive or walk past our working areas.

That's why I feel our new site signage is a great way to explain what we're doing in a way that connects with them."

Steve Mogford

"We think the banners are great and really customer focused. Feedback from county council colleagues has been positive and the signage really makes a statement about how United Utilities is investing in the North West. Across the region you are being held up as a beacon of how organisations should communicate to customers."

**Ginette Unsworth,
Communication Account
Director for Lancashire
County Council**

Capital Delivery signage family

To go with the banners we can help you with your compound signage and customer information boards.

Examples of both are provided.

Please speak to the Customer Comms team if you need to produce these signs

Wastewater info board: 1.0m x 0.75m

Capital Delivery signage family

Along with getting our signage right we also need to take into consideration the different type of fencing we use.

Along with heras fencing some jobs may use plastic barriers or some of our larger schemes may require closed hoarding.

Keeping these fences a consistent colour across all our schemes will continue to help customers to instantly recognise the work we're carrying out.

Post and plank fencing sites

Plastic barrier fencing

The new Safety at Street Works and Road Works code of practice stipulates that plastic fencing should be either red, orange or white. Please can you ensure that red plastic fencing is used. If using post and plank fencing please use red legs.

Corrugated barrier fencing

Corrugated barricade fencing should be green - paint reference RAL 6018 (yellow green).
