Health Foundation – Innovation Hub Bid

- To (systemically) support the successful uptake of innovations and improvements in health care
- Provider led / AHSN supported
- Up to £475k over 2 years
- EOI by 11 Nov

- Bid partnership assembled
- ICS Exec paper submitted

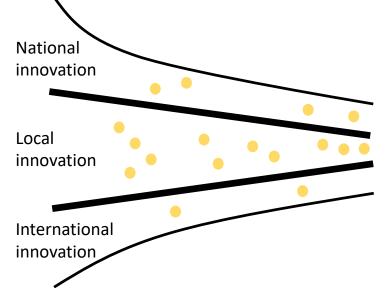

Lancashire Innovation Hub - innovative innovation delivering improved health & care

SEED Partners/ICS/PCB/IA brings

- leadership
- articulation of local health/innovation needs & priorities
- collaborative/organised local structures

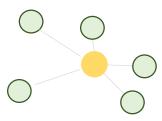

Our focus is on moving innovation to adoption & implementation. Our culture programme enables this

Culture
Programme
Adoption &
Learning

Lancashire Innovation Pipeline delivers:

- Identifying innovation
- Developing & accelerating innovation
- Fully supported innovators at every innovation stage
- Managed/supported innovation process

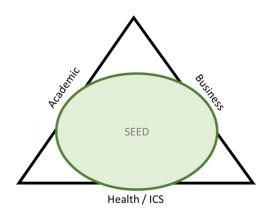

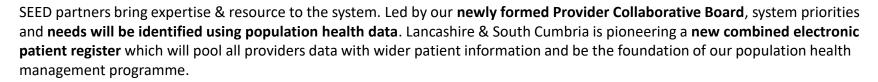

Each individual innovation/project is supported (hub & spoke) by best mix of SEED partners from health, academic & business sectors using our 'fully supported innovators programme'

Our diversity is our strength.
Our culture programme
supports adoption & learning
across our highly diverse
workforce & local communities

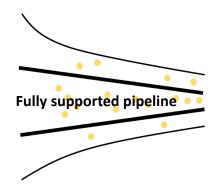

- Involving
- Developing
- Adopting in collaboration

Lancashire Innovation Hub - innovative innovation delivering improved health & care

Local 'collaboratives' bringing together QI, R&I and PPI leaders and teams, have been assembled using only existing resources. We are **'pro' organising our existing resources to the 'max'** rather than create new. SEED partners will develop **innovative solutions based on PHM identified priorities**, as well as having a role in **evaluation of PHM solutions in our communities**, providing opportunities for **real-world testing of innovations and improvements** in health care before trying to spread them.

Our fully supported pipeline is a UCLan led partner initiative to ensure innovators and innovations have support to progress at all stages of the innovation process. A combination of support packages provided by our universities, business sector partners including our LEP and the Innovation Agency (AHSN) means that clinicians or businesses are always given the necessary support they need to accelerate their innovation to being ready for use. Our pipeline supports national and international innovation and is linked to our business support mechanisms via our LEP.

Intensity and type of support will vary according to needs and the relative priority of the innovation. This is identified in an innovation audit which then positions innovative projects along our fully managed & supported pipeline.

Adoption &
Learning

Research has proven that innovators should be trained in the various theoretical approaches that exist for describing innovations in ways that can better support those adopting an idea from elsewhere to adapt them for new contexts and should be part of the innovator's 'toolkit'. Our Universities already train large numbers of health & care sector staff. This will be supplemented by a **programme dedicated to creating an innovation culture** developed from a successful innovation pioneer programme that empowered staff to innovate and provided coaching, training and backfill support to free their time to develop.

Our project will combine partners skills and resources around our newly opened **Health Innovation Campus** at Lancaster University. SEED partners working in collaboration will provide a **culture programme to enable innovation, spread and adoption from our leaders to frontline innovators**. Supporting & developing a system wide innovation delivery by **ingraining innovation, change management and collaboration in the work of our providers and wider system partners**.
